Safety instructions

Contact the distributor if any part is missing from the package.

USING THE NOSIBOO PRO

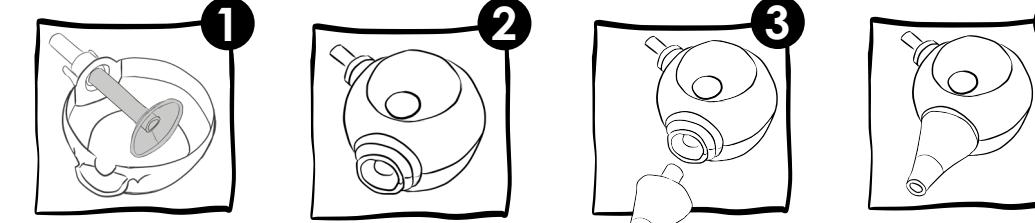

1. Before the first use

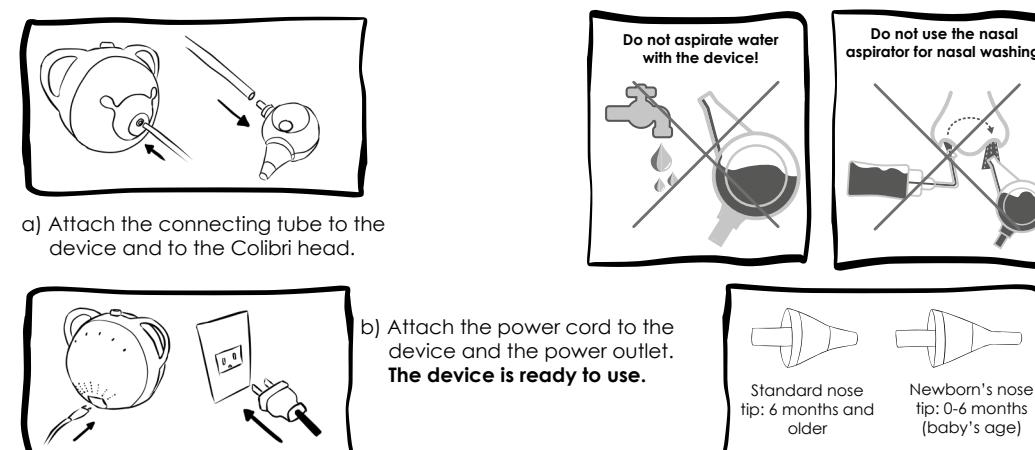

The device can be used for removing the nasal mucus from a child's nose. It cannot be used for any other purpose.

* Check the "CLEANING" section below for more details about the proper cleaning method.

2. Assemble the Colibri head

3. Assemble the remaining parts

INSTRUCTIONS FOR USE & SETTINGS

1 Select the correct suction power.

The effective and strong (max) suction power has been proven safe for nasal aspiration by ENT doctors.
Setting recommendations:
* min setting for newborns
* middle setting for babies
* max setting for small children and for pre-schoolers

If the mucus is thin, you can use the device at a lower setting. If it is thick, you can use the device at a higher setting than normal.

2 Turn on the device by pushing the control button and wait 5 seconds.

Aspirate the nose of infants after laying them into a stable position and hold their head during the process.
* You may also sit them in an infant bouncer or infant seat.
* If the child is already able to sit, sit them in your lap. In this case, do not lay the child on their back during the aspiration.

3 Hold your child in a stable position.

Gently insert the clean, dry nose tip into the child's nostril.
* Move the nose tip around gently to make sure that you get all areas of the nostril.

4 Gently insert the clean, dry nose tip into the child's nostril.

If you do not use the device for a longer period of time, disconnect it from the power network.

Do not disconnect the device from the power network during operation!

Switch off the device with the control button after use, but don't unplug the device from the electrical outlet until it is completely shut down (min. 5 seconds).

Do not cover the vents on the back of the device while in use. Hot air exits the device through the vents.

Make sure the heat exits in a different direction than where your child is.

While in use, the device should be in a stable position, standing on a flat surface.

Do not cover the vents on the back of the device while in use. Hot air exits the device through the vents.

Keep the device in a space where it is protected from dust, direct sunlight, and heat.

It is forbidden to use the Colibri head and the device without the collared tube.

Do not cover the vents on the back of the device while in use. Hot air exits the device through the vents.

Keep the device in a space where it is protected from dust, direct sunlight, and heat.

While in use, the device should be in a stable position, standing on a flat surface.

Do not cover the vents on the back of the device while in use. Hot air exits the device through the vents.

Keep the device in a space where it is protected from dust, direct sunlight, and heat.

Mild, very thick mucus can be dissolved by a mild saline solution. After using it, wait a few minutes, wipe excess discharge with a tissue, then reuse the nasal aspirator as directed.

Do not use more than 5 ml of saline solution at once.
